Season 1 (Version 1.1.3) — March 2026

“It’s more than magic... it’s my soul.” — Ahri ”

CHAMPION OVERVIEW

♦ CHAPTER OVERVIEW

This chapter introduces Ahri's identity, gameplan, and core strengths and weaknesses. Read this section to understand who Ahri is at a high level, then study the technical sections that follow for execution details.

1.1 Who is Ahri?

Ahri is the Spirit Fox of Ionia—a celestial enchantress who uses mystical orbs and supernatural charm to control the battlefield from a distance. In 2XKO, Ahri occupies the **Zoner archetype**: maintain screen control with her Orb of Deception projectiles, leverage superior mobility with Spirit Rush, and punish opponents who attempt to close the distance. Unlike traditional zoners, Ahri combines projectile control with excellent mobility and surprising close-range mixup potential.

Her gameplan revolves around zoning discipline: keep opponents at optimal range where her orbs are threats but her mobility lets her escape danger. Players who master spacing, orb trajectory reads, and Spirit Rush cancels will unlock Ahri's full potential.

1.2 Strengths and Weaknesses

↑ Strengths

- **Best zoning tool in the game** with Orb of Deception—multi-hit projectile at varying angles
- **Exceptional mobility** via Spirit Rush dashes; can close in or retreat at will
- **Charm mixup** enables tick-throw and overhead conversions after setup
- **Strong anti-air** with meaty upward normals; good at contesting jumps
- **Orb reflect mechanic** bounces orbs off walls for extended field presence
- **Team flexibility** works as point or anchor; Orb Assist covers many roles
- **[NEW] Spirit Rush can now cancel into Orb toss** for new combo routing

↓ Weaknesses

- **Low raw damage** compared to rushdown characters—reliant on spacing and meter
- **Orbs are slow**—skilled opponents can navigate around them with dashes
- **Poor ground poke game** at close range; normals are shorter than many characters
- **Charm is slow to startup** (19f) and is parryable; not a guaranteed mixup
- **Backdash slowed in Season 1**—retreat becomes more committal
- **Spirit Rush has recovery frames**; whiffing it is punishable
- **[NEW] Orb startup increased** by 2 frames in Season 1; less oppressive early-game

MOVE LIST REFERENCE

◆ CHAPTER OVERVIEW

Complete reference for every Ahri move: normals, specials, supers, and assists. For detailed frame data values, see Chapter 3.

2.1 Notation Guide

Ahri guides use **numpad notation**. Think of a numpad: 5 = neutral, 6 = forward, 4 = back, 2 = down, 8 = up, 9 = up-forward (jump). **jc.** = jump cancel, **[X]** = hold input, **dr.** = dash recovery (drift backward), **df.** = dash forward.

Symbol	Meaning
>	Cancel/chain from previous move into next
,	Link (requires strict timing) from previous to next
~	Follow-up/cancel into multi-stage move
dl./delay	Delay the following move slightly
j.	Jumping version of attack
jc.	Jump cancel into next action
land	Must land before continuing combo
[H]	Hold button for charged version

2XKO Button Notation Reference

			
Light	Medium	Heavy	Throw
			
Super 1	Super 2	Down	Forward
			
Back	Up	Plus	Next

2.2 Normal Moves

2.2.1 Ground Normals

Input	Name	Notes
5L	Foxtire Jab	6f startup; fast poke. Primary neutral button beyond orb range
2L	Crouching Jab	7f startup; low profile. Combo starter and anti-crossup tool
5M	Spirit Claw	10f medium-range poke. Cancels into Orbs or specials
2M	Crouching Claw	10f; low attack. Strong for tick throws and blockstring filler
5H	Fox Spirit	13f; launches on hit. Combo starter into air sequences
2H	Celestial Ascent (ground)	12f anti-air with good range. Reliable jump defense
j.H	Aerial Ascent	Main jump-in attack; angled upward. Can be used for float control
6H	Spirit Dash	Forward tilt; overhead property. Cancels into S1 for extension

2.2.2 Air Normals

Input	Name	Notes
j.L	Air Light	Strong air-to-air; good horizontal range
j.M	Air Medium	Primary combo extender in air strings
j.H	Air Heavy	Go-to air-to-air; counter-hit leaves opponent in hitstun until landing
j.2H	Air Down Heavy	Downward-angled air button; good for catching grounded opponents

2.2.3 Move Demonstrations

Ahri's 5L (Light)	Ahri's 5H (Heavy)
ahri-5l-light	ahri-5h-heavy
Replace with game screenshot	Replace with game screenshot
Ahri's 5M (Medium)	Ahri's j.H (Jump Heavy)
ahri-5m-medium	ahri-jh-jump-heavy
Replace with game screenshot	Replace with game screenshot

2.3 Special Moves

Input	Name	Notes
5S1 / j.S1	Orb of Deception	Primary zoning tool; multi-hit projectile. ↓ 18f startup, was 16f . AIR OK. Can angle trajectory
2S1	Orb Arc	Lob arc trajectory; optimal for oki setups and wall bounces
3S1	Orb Charge	Hold for charged projectile; covers wider area. Unblockable vs. crouch
6S2	Spirit Rush	Rapid directional dash. Cancellable into Orb for new routing; up to 3 dashes per input
2S2	Spirit Rush Down	Downward dash; good for repositioning and escape
5S2	Spirit Rush Hold	Hover in place; maintain position while throwing Orbs. Can chain Orbs mid-air
Charm System (Enabled)	Charm	19f startup; applies slow debuff on hit. Unblockable if opponent crouches. Parryable
	[S1]+S2	
	Hold [S2]	Extended duration; harder to react to on approach

2.3.1 Key Special Move Gameplay

Orb of Deception (5S1)	Spirit Rush (6S2)
	
Replace with game screenshot	Replace with game screenshot
Orb Arc (2S1)	Charm (S1+S2)
	
Replace with game screenshot	Replace with game screenshot

2.4 Supers and Ultimate

Input	Name	Notes
S1+L/M/H	Essence Theft	Enhanced Orb super; more projectiles. ↓ Startup reduced 2f but cooldown increased . Fullscreen coverage
S2+L/M/H	Spirit Overdrive	Install super; grants 5 enhanced Spirit Rush dashes with no recovery frames
S1+S2	Fox Phantom (3 bar ULT)	Cinematic multi-hit. High startup but massive stage position reset potential

2.5 Assist Moves

Input	Name	Notes
T	Orb Assist	Standard Orb projectile; medium speed. Good neutral coverage support
4T	Orb Arc Assist	Lob trajectory; better for oki and wall positioning
2T	Spirit Rush Assist	Dash support. Fast approach cover; good for point character combo extension

FRAME DATA

◆ CHAPTER OVERVIEW

All values reflect Season 1 (Version 1.1.3, March 2026). 60fps; 1 frame $\approx$ 16.67ms. Use this data to understand projectile timing, confirm spacing windows, and judge gap safety.

3.1 Normal Moves Frame Data Table

Move	Startup	On Hit	On Block	Notes
5L	6	+1	-1	Fast; best neutral poke
2L	7	-2	-3	Low profile; good anti-crossup
5M	10	-2	-3	Safe poke; chain to normals
2M	10	-1	-2	Combo filler; low startup
5H	13	Launch	-4	Launcher; confirm into air combo
2H	12	Launch	-3	Anti-air; good vertical range
6H	13	+3	-1	Overhead; safe on block
j.H	—	Launch	-4	Jump-in; angled attack

3.2 Projectile Timing Frame Data

Move	Startup	Recovery	Notes
5S1	18f	−2	Standard Orb; ↓ +2f startup S1. Air OK
2S1	18f	−2	Arc trajectory; better for fullscreen
3S1	24f	−5	Charged; unblockable vs. crouch. High end lag
[S1]	18f	−1	Essence Theft (Super); faster recovery

3.3 Reading the Frame Data

Startup: Frames before active. Lower = faster.

On Hit: **Positive** = your turn. **Negative** = opponent's turn.

On Block: **−3 or less** = mostly safe. **−4 or more** = punishable. **Positive** = continue pressure.

Launch = sends airborne; enables air combo.

Recovery: Frames of lag after projectile lands/recovers. Shorter = safer to throw raw.

3.4 Practical Frame Data Notes

- **5L** at 6f startup is one of the fastest jabs in 2XKO — use to interrupt pressure, counter tick-throw setups, or begin strike-throw mixups.
- **2L** at −1 on block is extremely safe — your primary low button for starting high/low 50/50s.
- **5M** with exceptional range is the best footsie tool for whiff-punishing and maintaining mid-range neutral control.
- **5H** at −4 on block is relatively safe — excellent in combos and as a long-range neutral check.
- **5S1 (Standard Orb)** at −2 recovery is safe to throw freely at mid-range; the projectile's travel covers your recovery window.
- **2S1 (Arc Orb)** is your safest oki setup tool; wall bounces are difficult to punish due to positioning advantage.

- **3S1 (Charged Orb)** at **-5** is more committal — only use when covered by other projectiles or when at safe distance.

UNIQUE MECHANICS

4.1 Orb Reflection System

Ahri's orbs reflect off stage walls, extending their presence on screen. Understanding wall bounces unlocks superior zoning patterns.

4.1.1 Basic Reflection

- **5S1** bounces at a 45-degree angle when hitting stage boundaries
- **2S1** arc trajectory allows natural wall positioning for oki setups
- Reflected orbs are **slower moving** but linger longer—opponents must respect both trajectories

4.1.2 Charged Orb (3S1)

- Hold S1 to charge; creates wider hitbox
- Covers more screen real estate; harder to navigate around
- Unblockable when opponent is crouching; overhead property adds to mixup layer
- High end lag (5f disadvantage on block) limits spam usage

Spacing Mastery: Position charged orbs at ranges where opponents cannot jump over them safely. This forces them to block or approach directly into your poke range.

4.2 Spirit Rush Movement System

Spirit Rush dashes are Ahri's primary mobility and mixup tool. Mastering the 3 dash charges and cancels is crucial.

4.2.1 Three-Dash System

1. **First dash:** **6S2** (forward), **2S2** (backward/down), **5S2** (hover)
2. **Second dash:** Can chain directionally; can mix directions mid-move
3. **Third dash:** Must commit to destination; recovery frames lock you in

4.2.2 Dash Cancels into Orbs

- After **6S2**, input **S1** to throw orb while dashing
- Combined mobility + projectile pressure is overwhelming when approached
- Dash recovery frames are eliminated when canceling into Orb

4.2.3 Hover Hold (5S2)

- **[5S2]** (hold) maintains position while opponent must approach
- Chain Orbs into each other during hover for multi-hit barrages
- Good for zoning discipline; forces opponent to respect the zone or take hits

4.3 Charm Mechanic

Charm is Ahri's primary mixup tool but has specific properties.

4.3.1 Charm Input

- **[S1]+S2** applies slow debuff and freeze frame
- 19f startup—reactable if thrown raw at close range
- After whiff, significant recovery gap enables counterplay

4.3.2 Charm Confirms

- On hit: **Guaranteed tick-throw into full combo** due to freeze window
- **+8** on hit advantage; enables overhead mixup with 3M follow-up
- Can be parried; requires setup with Orb cover to land reliably

NEUTRAL GAME

5.1 Core Neutral Pillars

1. **Orb projec tile control** — force opponents to respect distance
2. **Spacing discipline** — keep at optimal range where zoning wins
3. **Mobility escape** — use Spirit Rush to retreat when pressured

5.2 Key Neutral Patterns

5.2.1 Fullscreen Orb Loop

- Throw **5S1** and position yourself at midscreen
- Opponent either blocks or dashes through
- If they block: throw another orb; force approach toward your poke range
- If they dash through: 2H anti-air catch or **5L** poke

5.2.2 Wall Bounce Setup

- Near corner: throw **2S1** arc for wall reflection
- Orb now travels in two directions; opponent must navigate both
- On hit: confirmed combo or knockdown reset

5.2.3 Multi-Hit Barrage

- [5S2] (hover) while chaining S1 twice
- Creates overlapping projectile pattern; very difficult to navigate
- Forces approach or full chip damage accumulation

5.3 Defensive Spacing

- Never allow opponents to land at medium range where they can poke
- Use 2S2 (backward dash) to maintain distance
- If pressured: 2H anti-air or backdash to reset neutral
- Limit backdash string usage; Season 1 nerfs make retreat committal

5.4 Key Neutral Buttons and Tools

Button	Frame Data	Use Case
5L	6f startup	Fast interrupt; start strike-throw mixups
2L	7f startup	Godlike low poke; safe on block
5M	10f startup	Primary footsie tool; medium-range checks
5H	13f startup	Long-range neutral control; excellent spacing
5S1	18f startup	Safe projectile at mid-range; use freely
2S1	18f startup	Set up wall bounces and oki positions
3S1 (Charged)	24f startup	Covers escape routes; unblockable on crouchers
j.H	–	Primary air-to-air; beat opponent jumps

5.4.1 Orb Spacing Fundamentals

- **Fullscreen positioning:** 5S1 straight trajectory beats characters at screen center; throw to establish dominance
- **Wall bounce advantage:** 2S1 arc positioned 1-2 character lengths from corner creates double-threat coverage
- **Charged orb applications:** 3S1 wider arc covers escape routes; force opponents to block or approach through your poke range

- **Floating advantage:** [5S2] hover with chained S1 creates overlapping projectile walls that are extremely difficult to navigate
- **Spacing discipline:** Vary your orb timing and angles; predictable patterns get navigated; quality placement beats quantity

MIXUP SYSTEM

6.1 Charm-Based Mixup

While not as traditional as other mixup-heavy characters, Ahri's Charm creates gappable situations.

6.1.1 Charm Setup Requirements

- Requires Orb cover or distance buffering; raw Charm is too slow
- After **2S1** (orb arc), opponent blocks and freezes
- Input Charm while orb blocks line of sight: almost unreactable

6.1.2 Charm Block / Hit Mixup

- On block: Charm ends with **-3 on block** — relatively safe
- On hit: **+8** freeze frame — tick-throw into full combo or overhead
- Against parry: Charm gets absorbed but you're safe to continue pressure

6.2 Dash Direction Mixups

Spirit Rush dashes can mix left/right at close range for positional advantage.

- **6S2 > 2S2** (forward then backward dash) keeps opponents guessing on positioning

- After close knockdown: **6S2 + S1** (approach with orb) vs. **2S2 + S1** (hop back with orb) — creates left-right threat
- Oki positioning: dash to opposite side of body before Orb throw for crossup setup

6.3 Jump Arc Control

- **j.H** angled attack can be mixed with empty jump into throw
- Overhead property on **6H** vs. **2L** low mixup: condition opponent, then land big confirm
- After Limit Strike freeze: position jump trajectory for maximum crossup ambiguity

COMBO GUIDE

7.1 Beginner Combos

● Beginner — 5L Starter (anywhere)

Combo Input Sequence:

5L ▷ 5M ▷ 5H ▷ jc. ▷ j .M ▷ j .H ▷ j .S1

- Basic ground-to-air conversion
- Works everywhere on screen at any range
- Not the most damaging but 100% reliable link timing
- End with Orb super at midscreen for extended conversions

● Beginner — 5H Starter (anywhere)

Combo Input Sequence:

5H ▷ jc. ▷ j .L ▷ j .M ▷ j .H ▷ j .2S1

- Launcher into air chain
- After j .2S1 (arc orb), land and reset to neutral for oki setup
- No strict timing; great for learning jump-cancel chains

7.2 Intermediate Combos

● Intermediate — Charm Confirm (close range)

Combo Input Sequence:

[S1]+S2 ▷6T ▷66 ▷5M ▷5H ▷jc. ▷j.M ▷j.H

- Charm on hit grants tick-throw into tag launcher
- After tag, point character enters with follow-up combo
- Requires opponent to be charmed; setup with Orb cover

● Intermediate — 2H Anti-Air (anywhere)

Combo Input Sequence:

2H ▷jc. ▷j.M ▷j.H ▷j.S1

- Anti-air into full air combo
- Rewards good jump defense with guaranteed damage
- After j.S1: land with Orb for oki positioning

7.3 Advanced Combos

● Advanced — Spirit Rush Cancel Extension (corner)

Combo Input Sequence:

5H ▷jc. ▷j.M ▷j.6[S2] ▷j.S1 ▷66 ▷5H ▷[S1]+S2

- Uses Spirit Overdrive (S2 Super) install to enable wall bounces
- Dash cancel within air combo extension maintains momentum
- End with Charm for unblockable setup in corner

ARCHETYPE STRATEGIES

MATCHUP

8.1 vs. Rushdowns

Rushdown characters want close-range engagement where Ahri struggles most.

- **Examples:** Vi, Darius
- **Maintain distance obsessively:** Zone with Orb; backdash to reset spacing
- **Anti-air on jumps:** 2H is your savior vs. aggressive jump-ins
- **Fullscreen orb pressure:** Forces them to approach into your poke game
- **Air escape:** Jump away and float with [5S2] to avoid corner traps
- **Charm in gaps:** When they advance, Charm between their strings for crowd control

8.2 vs. Other Zoners

Matchup against similar archetype requires precision spacing.

- **Examples:** Teemo, Jinx
- **Orb battles:** Your projectile speed is comparable; focus on placement rather than

spam

- **Mobility edge:** Spirit Rush lets you escape crossfire where they get trapped
- **Landing into medium range:** Where zoner game weakens, your pokes dominate
- **Wall bounces:** Position orbs near walls to create double-threat situations
- **Patience:** outlast their momentum; eventually they get pushed to corner where you control

8.3 vs. Grapplers

Grapplers excel at close range; Ahri must NEVER let them in.

- **Examples:** Blitzcrank, Braum
- **Never let them land a grab:** Fullscreen orbs force safe distance
- **Backdash spam:** Create gap; if they approach, **2H** anti-air
- **Spirit Rush escape:** On block, immediately **2S2** backward; deny throw combos
- **Projectile wall:** Multiple orbs in flight simultaneously = no grab landing

INDIVIDUAL MATCHUPS

CHAMPION

9.1 vs. Ekko

Key Threats:

- Timewinder pressure and oki setups
- Afterimage mixups confuse defensive reads
- Time-slow reaction grants huge combo windows

Counter-strategy:

- Maintain fullscreen with Orbs; Ekko struggles at range
- Never jump predictably into Timewinder oki; mix empty jumps
- Your **2H** anti-air is faster; use it to contest his approaches
- Corner oki: throw **2S1** on wakeup; forces Ekko to navigate your orb trap
- Charm his dashes: time it to interrupt his clone approaches

9.2 vs. Vi

Key Threats:

- Vault Breaker armoured gap-closer destroys zoning
- Powered Up mechanic amplifies pressure
- Strong anti-air punishes jump escape attempts

Counter-strategy:

- Orb spam early; catch her before she gets close
- Never jump; she dominates the air. Backdash instead
- Throw charged Orb (**3S1**) to cover approach angles
- **[5S2]** hover and chain orbs for multi-hit coverage
- When cornered: Charm into escape combo or call Assist for breathing room

9.3 vs. Jinx

Key Threats:

- Fishbones rockets trade favorably vs. your Orbs
- Flame Chompers lock screen control
- Mega Death Rocket covers massive range

Counter-strategy:

- Orb placement: angle them away from rocket trajectories
- Wall bounces deny her fullscreen dominance
- Stay airborne (jumps, dashes) to avoid Flame Chompers
- Your Spirit Rush mobility edge: escape her rocket corridors
- Midrange wins this matchup; get there via careful orb advancement

9.4 vs. Teemo

Key Threats:

- Noxious Traps zone the entire screen
- Poison chip accumulates; run-down damage is oppressive
- Blinding Dart counter-zoning is pressure

Counter-strategy:

- Respect trap placement; navigate around them with dashes

- Your Orb coverage of midscreen denies his setup space
- Float ([5S2]) while throwing Orbs to avoid traps entirely
- Anti-air his jumps with 2H; he also struggles at range
- Charm into combo when he over-commits to Toxic Shot

9.5 vs. Ahri

Key Threats:

- Identical zoning tools mean game is about spacing nuance
- Charm timing becomes critical
- Orb reflection understanding

Counter-strategy:

- Master wall bounces; they determine zoning superiority
- Predict opponent's Charm timing; interrupt with your own Orb
- Movement options (Spirit Rush timing) are the differentiator
- Don't spam; quality orb placement beats quantity
- First player to land a confirm likely wins; mirror favors experienced player

TEAM COMPOSITIONS AND SYNERGIES

10.1 What Ahri Wants in a Partner

- Close-range amplification of her zoning setups
- Assist that covers approach angles she cannot
- High damage to compensate for Ahri's lower raw numbers
- Good tag-in presence for meter extension

10.2 Best Teams Overview

Ahri	Partner	Synergy
Ahri	Ekkko	Dual projectile zoning + mobility extension; strong mid-range game
Ahri	Vi	Ahri zones, Vi closes; complimentary mobility types
Ahri	Jinx	Fullscreen projectile superiority; rocket + orb combination
Ahri	Yasuo	Wind Wall complements Ahri orbs; strong assist synergy
Ahri	Braum	Defensive anchor; shield backing up Ahri's zoning

10.3 Ahri / Ekko

10.3.1 Why This Team Works

Dual projectile system with complementary speeds and angles. Ekko's clone mixups pair perfectly with Ahri's Orb walls for nearly unavoidable offence in corner.

10.3.2 Combo Synergy

- **Team Combo: Ahri/Ekko (anywhere)**

- 5L > 5M > 5H > T (Tag Launcher) — Ekko enters air combo
- Ekko air sequence chains j.S2 for afterimage positioning
- Handshake Tag back to Ahri; she re-enters with 2S1 arc for oki trap

10.4 Ahri / Vi

10.4.1 Why This Team Works

Opposite gameplans that complement: Ahri controls fullscreen while Vi dominates close range. Together they suffocate opponents mid-ground.

10.4.2 Neutral Strategy

- Ahri throws Orbs; Vi cover advance with Assist
- When opponent jumps over Ahri orbs, Vi anti-air catches them
- Pressure cycles: Ahri zone → Vi approach → reset with Assist → repeat

10.5 Using Ahri as Assist

10.5.1 Forward Assist (T)

Standard Orb projectile:

- Covers point champions' approach from neutral
- Enables time for point character to set up combo
- Multi-hit property helps confirm damage

10.5.2 Back Assist (4T)

Arc trajectory for oki and wall positioning:

- Locks down corner positions after knockdown
- Prevents Getup Attacks during point oki
- Good for coordinated fullscreen zoning with point

ADVANCED CONCEPTS AND TIPS

11.1 Orb Trajectory Advanced Theory

Mastering orb angles is Ahri's highest-ceiling mechanical skill.

- **5S1** straight trajectory beats characters at screen center
- **2S1** arc reaches corners safely; sets up wall bounces
- Wall bounces angle back onto screen; opponent forced to navigate two threats simultaneously
- Charged **3S1** wider arc covers escape routes
- Holding **5S2** (hover) and throwing orbs creates perceived field control

Wall Bounce Mastery: Position arc orbs 1-2 character lengths from corner. They bounce at 45-degree angles and nearly always cover opponent escape routes.

11.2 Season 1 Patch Notes Summary (Version 1.1.3)

Nerfs

- **Orb of Deception** startup: 16f $\rightarrow$ 18f (+2f startup)
- **Backdash** slowed (affecting Ahri, Ekko, Warwick, Vi, Yasuo)
- **Charm** cooldown increased; less spamming in blockstrings

Bufs

11.3 Common Mistakes to Avoid

- **Spamming orbs without spacing:** Predictable patterns get navigated; vary timing and angles
- **Overusing Charm:** 19f startup is reactable raw; always use Orb cover or distance
- **Whiffing Spirit Rush:** Recovery frames are long; only dash when safe
- **Neglecting wall bounces:** Biggest zoning advantage; corner play determines wins
- **Poor oki sequencing:** After knockdown, throw arc orb immediately; denies Getup Attacks
- **Trying to outpoke at close range:** You lose this game; retreat and re-establish spacing

11.4 Training Mode Optimization

In training mode:

1. Set opponent at fullscreen; practice pure orb zoning spacing
2. Test wall bounce angles near corners; understand ricochet patterns
3. Practice Spirit Rush cancel timing into Orb throws
4. Record combo sequences; verify link timings at all ranges
5. Use slow-motion to visualize projectile hurtboxes and navigation options

1

QUICK REFERENCE

12.1 Essential Inputs Cheat Sheet

Action	Input	Use Case
Fast neutral poke	5L	Primary check; safe confirm
Anti-air	2H	Jump defense; leads to combo
Launcher	5H	Ground-to-air conversion
Standard Orb	5S1	Fullscreen zoning
Arc Orb (oki)	2S1	Corner setup; wall bounces
Charged Orb	3S1	Unblockable coverage
Forward dash	6S2	Approach + Orb cancel
Backward dash	2S2	Retreat to reset neutral
Hover + chain Orbs	[5S2]	Multi-hit stacking pressure
Charm mixup	[S1]+S2	Tick-throw setup
S1 Super	S1+L/M/H	Essence Theft; fullscreen
S2 Super	S2+L/M/H	Spirit Overdrive; 5 dash install
Ultimate (3 bars)	S1+S2	Fox Phantom cinematic

12.2 Tiered Gameplan Checklist

Beginner Goals

- Learn basic Orb spacing; understand how far they reach
- Practice fullscreen zoning loops (throw, retreat, repeat)

- Get comfortable with **2H** anti-air timing vs. predictable jumps
- Master the 5L combo into air chain (no complex links)

Intermediate Goals

- Incorporate wall bounces into corner pressure
- Execute Charm confirms with Orb cover
- Learn Spirit Rush cancels into Orb throws
- Practice **2S1** (arc) placement for oki setups
- Condition opponents to respect fullscreen orb patterns

Advanced Goals

- Optimize wall bounce angles for multi-threat scenarios
- Convert off landing confirm into Charm mixup into tag combo
- Execute full Spirit Overdrive install super routing with dash cancels
- Master meter management for smart Orb super timing
- React-confirm to Charm hits; punish defensive parry reads with instant resets
- Develop reading skills for opponent dash patterns; predict approaches

This guide compiles information from Mobalytics.gg, Games.gg, Mizuumi wiki, and the official Riot Games 2XKO champion resources. Data reflects Season 1, Version 1.1.3 (March 2026). Game data is subject to change with future patches.
